<u>Assignment</u>

Topic: The positive and negative effects of Information Technology Engineering on society.

Information technology engineering is one of the most popular subjects for students. For now and the future, this subject is really impact on people's live so much on technology civilization. It helps technology much advance that make people lives more easier and more comfortable. People can enjoy higher incomes and better standard of living. However, every coin has two side advantages and disadvantage as information technology has both positive and negative effects on our society.

There are 3 main negative effects of information technology on society. First, it effects on language proficiency. Technology produces a lot of applications for people to communicate such as messenger, telegram and etc. This the reason that people don't need to talk face to face that would cause problems like confidents, self-control and the way to talk attractively. People also don't need to care too much on their spelling of different words and usage of proper grammar by the app provide them every time. Second, people get low communication with each other. Most of people have electric device like smart phone, laptop, iPad that could give them entertainments such as game, Facebook, chart, YouTube. People don't like meeting any more. By the real world, family before, after dinner time they talks with each other a lot of things while watch TV but now they finish their dinner; they find their place and use their devices. Last, human health are commonly affects. Most of people now wear glasses even young people because they use their devices at least 3 to 4 hours a day that could make their eyes have problems. They also have problem with memory or their brain by they could become an addicted and lazy people as they think on using their devices that give them fun and free.

On the other hand, information and technology also provide 4 main positive effects on society. First, it help education field. Students can learn though their devices. Students can find many sources for study and it easy to keep or carry. It also have applications to help their study that they can summit assignment or homework to their teacher. Second, it make an easy on communication and information. People can interaction with each other even they're near or far from each other. People also can get news or information from their society, school or work place fast and easy. Third, it help people business. Work are reduced like paper work, calculation, communication, and human forces. When we use technology work is much fast and save money so income is more increases. Last, it help human health. Human can cure and configure their health problems by using machine. Also can find medicine for new deceases. More, the app in your smart phone or your smart watch can tell your about your daily health. Information technology have many more positive effects that could help people live easy.

Inconclusion, information technology can give people many positive effects and it also can give people negative effects too. Information technology is improved to make human live easier but if people don't it correct ways, it will give the bad effects.
